

**Press conference of Mr. Valery Baranovsky in "Interfax" on:  
"Another truth about Global Climate change, or full "Copenhagen"..."  
Kiev, 21.12.2009.**

Hello, dear colleagues.

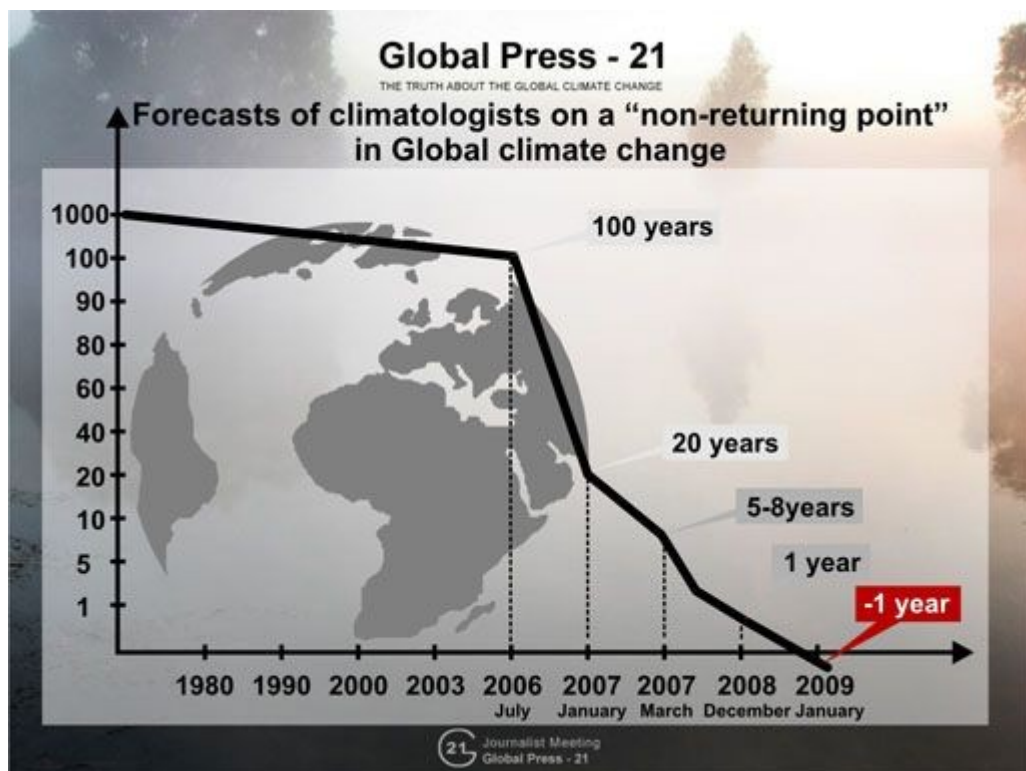

I'm glad to meet you and to have this possibility for a serious topic discussing. Perhaps, today there is no media, which would not have covered the great event that took place on Earth. This is a meeting in Copenhagen attended by scientists and politicians from 190 countries. At the summit they decided many issues, planned to do everything possible and impossible things to make us looking into the future. They planned to make us believe that science understands and makes solutions for climate problems.

I am a journalist and have a moral right to talk about Global climate change as I have been engaging in studying this problem for about 10 years and have my own position on this issue. All that time I have been distributing information on climate change through any available mass media. I have been working on the problem of the Global climate change because in fact there is no global warming or cooling. Today a unique scientific system makes great strides in the applied scope. Ordinary people are sure and feel safe about the professionals which know exactly what & how happens on Earth.

I and my team have been monitoring natural disasters and other parameters of our planet for about 10 last years. I addressed to Albert Gore, Prince Charles and have been communicating with "consenting" and "non consenting" scientists, as well as with officials. When I'm watching the news items of my colleagues I'm shocking often at how superficially they are doing it. Well, probably, it is not their competence, but some things they should know and understand.

The Climate change issue has started to be discussed seriously about 10 years ago because the actual data of climate monitoring does not fit with the models and forecasts of specialists. Our problem is not in misunderstanding of methods for climate models calculating, but in understanding the really ongoing processes. That is to decide what exactly is happening with our planet. Today specialists don't have any consensus. Some of them talk about warming, others - about cooling and about the cyclicity of these processes in the history of our planet.

For over the past 10 years, the International Panel on Climate Change (IPCC) has been predicting the so-called "point of no return". This is the time limit after which the processes of climate change are already impossible to stop or getting back. This picture shows how rapidly the leading climate scientists' forecasts have been changing over the past 3 years.

At the Climate summit in Poland (December, 2008) the members talked about the remaining 1 year to the "critical point". At the Copenhagen summit the "non-returning point" wasn't mentioned at all. When Barack Obama became president, he asked the experts to make estimates of the climate change impact and to plan the development of energy-saving technologies. NASA experts have used all available data and the best computer systems. As a result, they concluded that the "non-returning point" was passed in January 2009... What is 3 years for the planet Earth? It is one thousandth of a microsecond for the universe's scale. Just imagine that we are seriously ill and the group of best doctors comes to us. They begin to diagnose and first they say that there is nothing to worry, and then they say that there are 2 or 3 years left for us. As a result, we are told that the treatment will not help as we are already dead. But we are still alive...

The climate experts' problem is that they don't know and don't understand fully the processes going on. There is a war in the world between industrial and financial groups backed by old and new technologies. As a result, new technologies should win because it is right and inevitable. However, this struggle involves a struggle between scientists. Modern scientists are no different from politicians, they live in a system that operates on kickbacks and grants schemes. Warring financial-industrial groups are characterized by greed, cynicism and lies. The British scientist James Lovelock said that the "non-returning point" of climate processes was passed in 2000. The western mass media has called him an idiot and an old senile. However, his preventions are not just an empty words. Recently (December, 19th) it was minus 17 degrees at night in Odessa, and on December 20th it was plus 5 and was raining in the afternoon, but today (December 21st) in Odessa it is minus 15 degrees again. How the scientists can not observe the Climate change? Because it is a pure cynicism ... How can we adapt to this?

They recently gathered in Copenhagen. What were they talking about? They were talking about quotas. What is the Kyoto Protocol? In 2003 I gathered Odessa region journalists and made a statement that Kyoto Protocol is one of the greatest swindles of the 20th century. If we move the money from trouser pocket into another pocket of the same trousers the amount of money doesn't change. Such summits are just a game in humanity that doesn't change anything. Why is it so? Today the world's leading scientists admit that something is happening and make recommendations to Heads of governments on various wide-scale projects for our safety.

The concentration of CO<sub>2</sub> in the air is an interesting value which can now be measured and is historically monitored. Recently it was emerged the history of the CO<sub>2</sub> graphs correcting. This scandal is just beginning and soon you'll see how the old financial-industrial groups will "run down" into the new groups... As for CO<sub>2</sub> issue, it is necessary to understand that anthropogenic CO<sub>2</sub> emission is disproportionately smaller than its natural emission (e.g. volcanic eruptions on Earth). Probably many of you also know that today the Taiga in Siberian "operates" in reverse regime: instead of absorption it exudes CO<sub>2</sub>. This year (2009) scientists using ordinary sonar (for fish shoals scanning) accidentally discovered (near the Spitsbergen island) hundreds of open gas plumes emitting methane in huge quantities. By the way, according to scientists, methane is 21 times more greenhouse-formative than CO<sub>2</sub>... In 2001 I made a statement and repeat it now: the impact of human civilization on the Global climate change processes is no more than 5%.

But in Copenhagen they were prosecuting a regular "sharing" on the distribution of quotas and resources between developed and developing countries. They decided that in the next 100 years the temperature of the planet should not rise above 2 degrees Celsius.

And this have decided the scientists with the same approaches that have helped them for 3 years to adjust the prediction of "non-returning point" from 100 years to -1 year... It is another lie. Today they can not predict the weather even for a few days. And we have many evidences of this.

Today Russian climatologists speak generally about global cooling. In 2008 there were frozen lakes in Canada which previously had never been frozen. When it was minus 30 degrees Celsius in Canada and in Australia was fires and severe drought (with the 80% loss of harvest), then why are they talking about global cooling or global warming?

And now let's get acquainted with the proposals of scientists in order to stop global warming.

1. Making an artificial continent from Styrofoam and its shipping to the ocean for the sunlight reflection.

Why do they suggest that idea? Because today the ice volume and the snow cover area are reducing so drastically that the sunlight reflection (albedo) is smaller than it was 20 - 30 years ago. The authors of the project believe that they will reduce the oceans heating with the white foam...

In December of 2009 it was reported about the discovery of an iceberg near Australia with size of 19 x 8 kilometers (or 150 square kilometers). This characterization is not correct because icebergs are not measured by the area, but by the volume. If the thickness of those melted iceberg at least 100 meters then such a piece of ice could cover the Kiev region with the 50 centimeters ice layer (like the mega-ice rink). But they are still talking about the iceberg area... Recently, by accident there thousands of icebergs were discovered from a satellite near the New Zealand. Scientists understand that the ice will be melting and the ocean level will rise... In general they hope to cope this eventually. It's their opinion. And here is my opinion: if the scientists will remain such approaches for solving the Global climate change problem, then in the next 7 - 8 years the USA as it is will disappear.

2. Scientists have proposed a project in which 10 000 thermo-barges will throw down hot water into in the ocean in winter, and in summer they will throw down the ice.

The project is associated with the influence on the Gulf Stream, which is getting colder. This is normal and is clear even for schoolchildren. If this project is approved and launched it would cost at 600 Euro for each European. Ukrainians are also included in the project funding. Ukraine is not accepted in the European Union, but has been included in this money and kickbacks...

3. One of the richest people in the world, Mr. Bill Gates, decided to finance the following project:

In the center of the hurricane origin goes a few vessels to pump out water from the depths of 150 - 200 meters on the surface.

Thus, "the captain of the pumping fleet" expects to protect the U.S. east coast and the Caribbean region from the destructive disaster...

The assurance of climate scientists which are involved in such developments is striking. There is a simple question for them: "How do the hydrosphere and atmosphere interact?" Stories about schemes and models they have will not be accepted, because in practice, they are useless.

There is another question for climate scientists: "Why has the wind rose at medium altitudes changed?". Erenow experts knew the certain movement trajectory of air masses and used them for predictions. But today everything has changed. They do not understand why it happened. They also don't understand why the magnetic field of the Earth has reduced to a minimum.

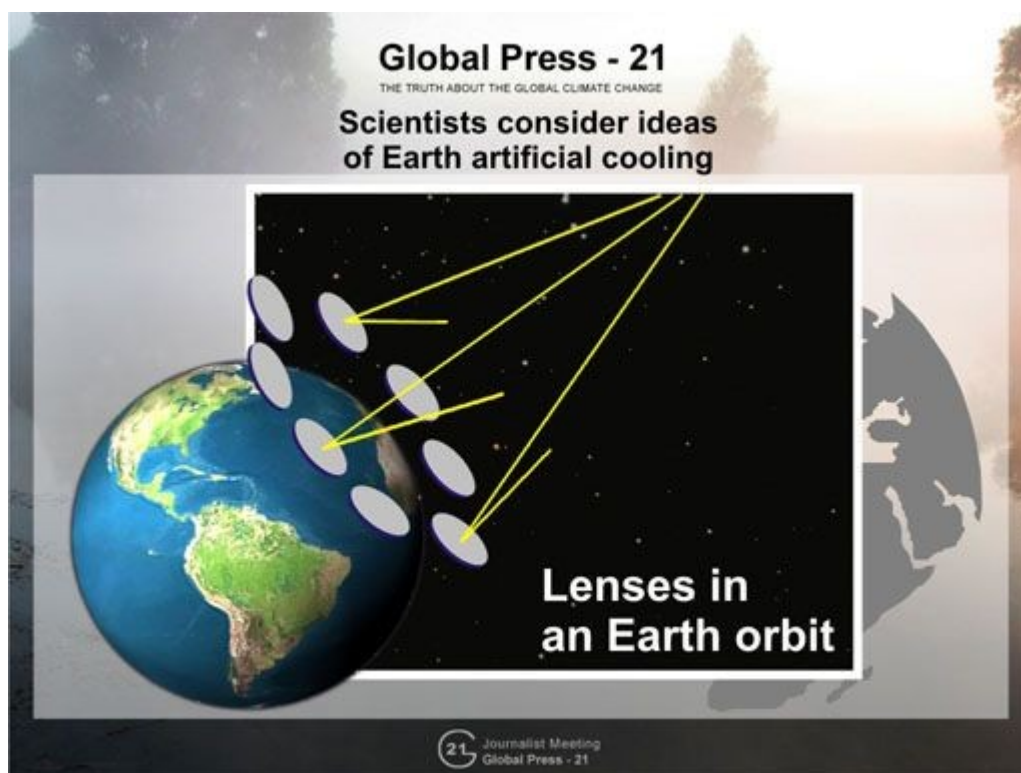

4. Scientists suggest painting roofs and roads white for sunlight reflection. Thus, they are planning to reduce the heating of the planet...

5. Scientists offer to launch giant mirrors into orbit at the equatorial region for sunlight reflection. These projects cost billions of dollars...

6. There has been also proposed a project to launch and spread many small lenses in the Earth's orbit (10 - 12cm in diameter). The project costs up to 350 million dollars.

7. To reduce the sunlight falling on Earth scientists propose creating artificial volcanoes. Each project costs tens of millions of dollars. Such handmade steam shop will throw soot into the atmosphere making it less transparent ...

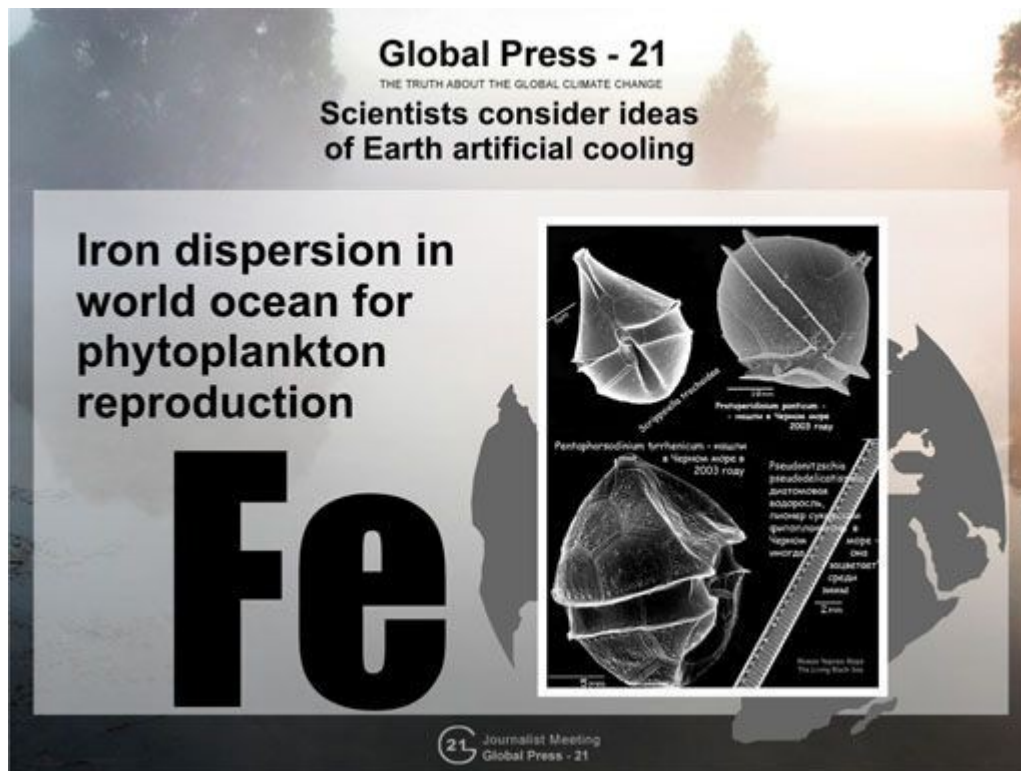

8. Russian scientists offer the following project: with the help of rockets to launch and disperse into the atmosphere from 2 to 10 million tons of sulfur at a height of 12 - 14 km.

It is expected that the sulfur particles would hold the part of sun rays and wake the warming of the lower atmosphere. The question is another: scientists today do not even understand the interaction of atmosphere and oceans, but still offer these projects - experiments...

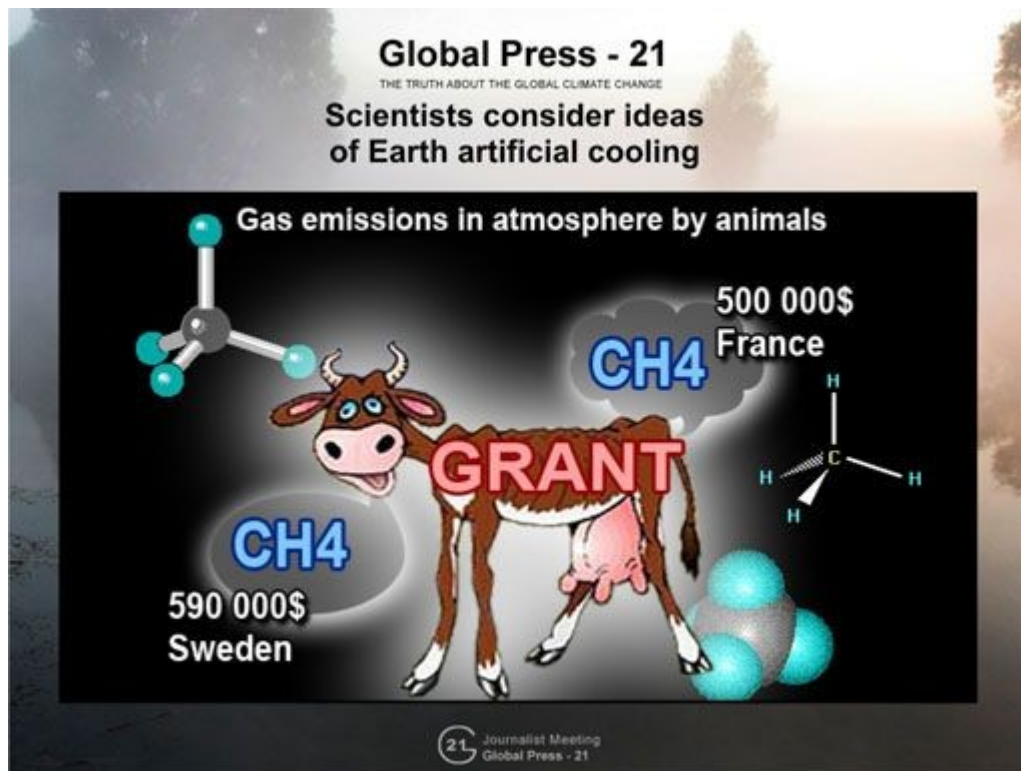

9. The next project is as follows: spraying iron in the oceans for increasing of the phytoplankton reproduction, which will absorb more CO<sub>2</sub>.

The International Organization for the ocean environment Protection has forbade the implementation of this project. Despite of that, in March - April 2009 the Indian-Germanic project "Lohafex" was launched on a small scale (several square miles). The results have disappointed investors and professionals: the phytoplankton began to multiply, but it was immediately eaten by the zooplankton. The effect was clearly not in favor of greenhouse gases fighters. The principle is simple: they do not fully understand the processes, but understand that it needs something to be done for the fund getting...

10. Scientists believe cattle are one of the culprits of Global climate change. Swedish and French scientists got more modest grants - for only 590 and 500 thousand dollars they have developed a special pills that prevent the methane exudes from cows in the process of digestion. The tablet has diameter of 12 cm and thickness of 3 cm.

How does the cow swallow them - is another question, but they did. And all of this is potential business. So, apparently, we will be asked soon to order the pills from Europe for our cows...

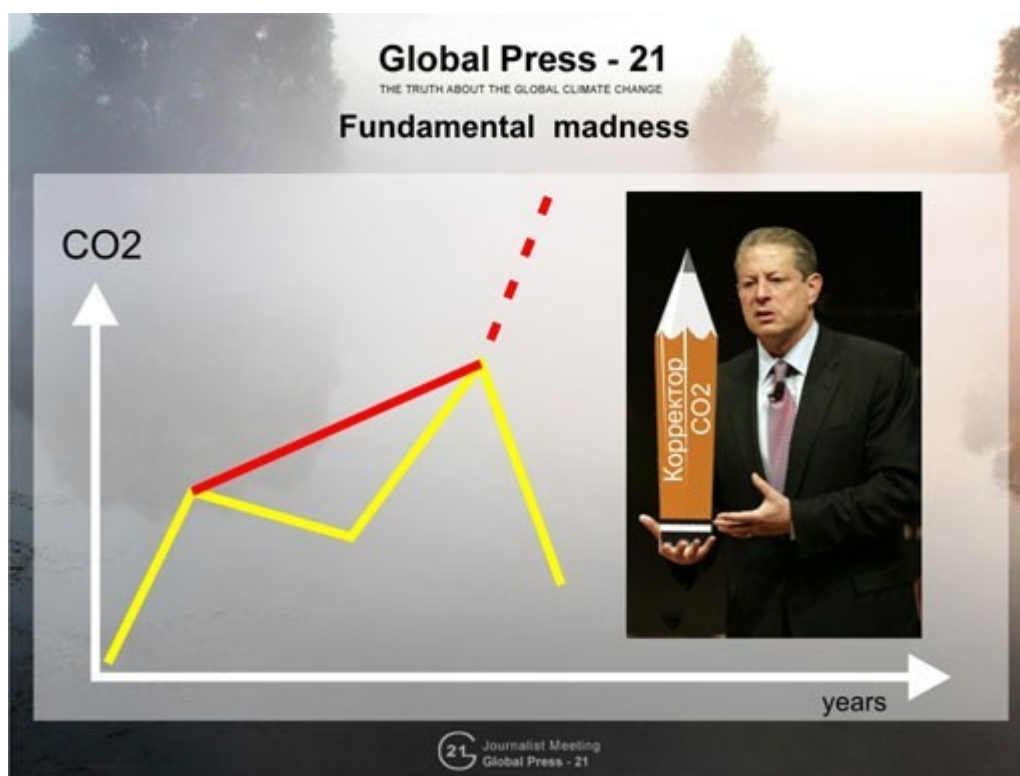

11. Scientists offer today to protect our world from the methane produced during the digestive process of animals. New Zealand scientists have invented anal respirators for cows. And it is seriously proposed...

12. Another folly by Australian scientists. The kangaroo intestinal tract practically does not emit methane. Therefore it is proposed to transplant the kangaroo's coli form bacteria into cow's digestion system. It would be ideally, of course, to create a hybrid "kanga-cow" because Kangaroo takes up little space in the barn and in their bag could still beat butter and cheese.

And perhaps, such ideas soon will arise because those are waiting for funding... Perhaps many of you has seen this interesting film. It states that the cause of all evils on earth is CO<sub>2</sub>. I have previously expressed my opinion on CO<sub>2</sub>. Mr. Albert Gore is a professional and understands that CO<sub>2</sub> is increasing. But this is not the factor that should pay attention. In his work he used some things. If a scientist do not like some graphs he can correct them.

Some scientists say they have not done this and report that it was a hypothesis. But the hypothesis and the prediction are two different things, because the forecast is calculated on the basis of actual data. But they all propose their projects on the basis of these hypotheses. For example, the artificial forests – it is many towers which will absorb CO<sub>2</sub>. Where will it be located - is not important, but such projects and their developers are waiting for funding.

Today, we rely on scientists and climate specialists, we delegate to them the rights and hope that they are professionals and understand everything.

The problem of our civilization is not in greenhouse gases, but in our scientific paradigm. In a basic science we have not left for an inch from the Middle ages. We haven't moved further from the Newton's prompts. By the way, scientists know that some of Newton's things have been translated incorrectly and are still in the textbooks.

Many of you have heard about the Large Hadron Collider (LHC). There have been disputes as to whether an explosion or not, whether the hole or not. I called this collider as "faecalayder". This "black hole" has formed yet – in the budgets of those countries that participated in the project. This is machine for exhaustion of money and brains. Why are such statements? Recently there was such news in the newspaper "The Sunday times": "Scientists have concluded that the problems with the launch of the LHC are no accident. According to physicists Holger Beh Nielsen (Niels Bohr Institute in Copenhagen) and Masao Ninomiya (Yukawa Institute for Theoretical Physics in Kyoto), the LHC creates obstacles itself in order to prevent scientists from CERN (the European Center for Nuclear Research) to make a series of discoveries..."

**Global Press - 21**  
THE TRUTH ABOUT THE GLOBAL CLIMATE CHANGE

**Fundamental madness**

Researchers concluded that the launch problems with the Large Hadron Collider (LHC) is not accidental. According to physicists Holger Beh Nielsen (from the Niels Bohr Institute in Copenhagen) and Masao Ninomiya (from the Yukawa Institute for Theoretical Physics in Kyoto), **the LHC creates itself obstacles in order to prevent scientists from CERN (European Centre for Nuclear Research) to make a series of discoveries.**

*CERN managing Officer  
Brian Cox from the Manchester University*

21 Journalist Meeting  
Global Press - 21

Do you understand what they have stated for? That is the iron with a lot of magnets has decided not to run... Moreover, Brian Cox (University of Manchester, managing officer at CERN) confirms these conclusions.

Do you understand this? I.e. your camera now will stop recording, your pens will stop writing and note-takers will be shut because they will decide not to put down the notes. This is idiocy from leading scientists...

Besides they haven't run the Large Hadron Collider yet (LHC), but have already requested money for the Linear Hadron Collider (LHC). And this is also not less than 10 billions of dollars.

**Global Press - 21**  
THE TRUTH ABOUT THE GLOBAL CLIMATE CHANGE

**Fundamental madness**

They have not managed to start the Large HC,

but have asked for money on Linear HC

21 Journalist Meeting  
Global Press - 21

But let's come back to the Global climate change problem which concerns everyone on Earth. Look at the forecast of Belgian scientists on the dynamics of natural disasters and their impact on the world economy.

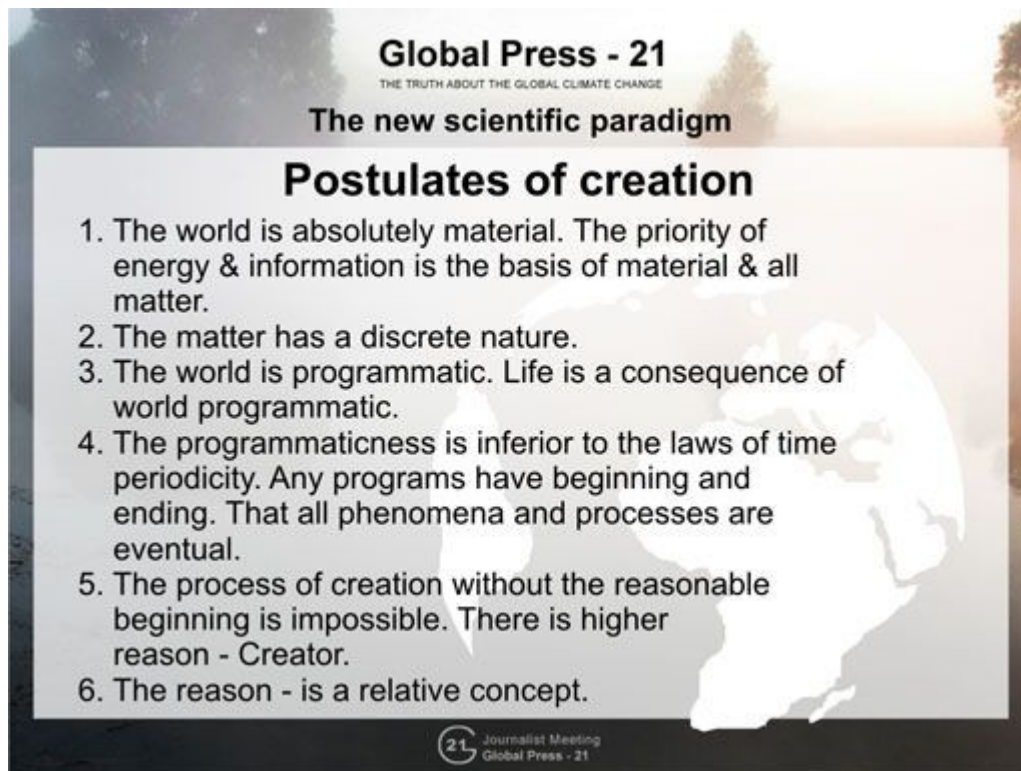

According to the forecast, after 2015 the volume of damage from natural disasters will exceed the volume of world gross product. This means that after the intersection of two curves there cannot be any plan administrate of national economy because all free resources will be putted on eliminating of the disasters consequences.

And if you remember the graph with the prognosis of "non-return point", I doubt that this intersection will be in 2015. And when someone reports today that the financial crisis avoided them and that the world economy is being restored, so it is not true. Any disease begins with sneezing or tears and then the main thing starts. We have not entered the financial crisis yet. Because when you lose each year more than able to produce - any economy is not sustainable.

Orange plantations in the USA filled with ice, the Spain in ice, stopped trains in tunnel under La-Mansh, hundreds of cancelled flights, paralyzed transport infrastructure in Europe... All these losses are only growing. And why are they growing and will grow? Because the specialists see the problem of Global climate change as the following. When there is a pigment spot on the face of the TV annoncer, they put some make-up on his face and take this spot away. But when there are pigmented spots on the face and hands it is a sign that there are problems with liver. The situation today is the same: specialists paint over the face with a tonal cream when the liver is decomposing.

All what physics and climatologists are talking today about Climate change is like a brainstorm in the kindergarten. They say what they have already seen. They do what they have already heard. Because they have a medieval world outlook. Fortunately, there are people who understand and know, those who have been saying about it for almost 10 years. People of Ukraine must be happy as this country will change the fundamental science of the world. We needed to come to this sorrow on the Earth by ourselves to understand all these real causes. Because the mind is a relative concept, and not an absolute. Emperor Egey has not casual founded the city of Kiev. There are laws that we either explore and use or life itself will make us learn them. There is a group of scientists who are redesigning their world outlook, because they know and understand these laws. The new scientific paradigm - is our alternative.

These postulates were presented in 2003 at the International climate conference in Moscow. And Russian specialists then said that climate change is even mostly beneficial. They hope to cultivate maize on the Kola Peninsula...

Dear ... dinosaurs (the Ukrainians were called the dinosaurs). I want to say that after 3-5 years we won't be able to receive Russian gas. Because the main areas of Russian gas extracting is tundra (permafrost). I don't want they will be bad, my wife is from Perm.

But Russia has two woes: fools and roads. And to ensure that there has been provided livelihoods (from which we are also dependent) it is needed a lot of money which has no country.

Scientists today are seeking for divine particle – the Higgs boson which has formed the surrounding world. And I feel ridiculous. After all, scientists - fundamentalists gave us some information. The probability of simple protein molecule random formation is  $10^{-113}$ . And mathematicians consider that event is impossible whose possibility is  $10^{-50}$ . Now just answer yourself: if the event is not possible when the probability of 1 / (10 with 50 zeros), and they say that it happened with probability of 1 / (10 with 113 zeros), then where are they fairly with us? Where are they talking about it?

This slide "Time theory"- is a tens of Nobel prizes... but we don't need laureates.

Recently in Copenhagen a dinosaur statuette have presented to Ukrainians since we are endangering dinosaurs. And I wish to hand over a pig to the Nobel Committee, which awards for fundamental researches and discoveries in physics. Because this Committee recognized that we are the random phenomenon.

Today they encourage those people who are leading a civilization in deadlock. Because the probability of that our Universe was created as a result of two matches' boxes explosion, the same as we have appeared as a result of maternity homes explosion...

And today this is the highest form of the mind properties. This is the absolute false behind which is our extinction (unfortunately it may be even a rapidly). I am not frightening you and do not escalate the situation, but I just know what I say. Because my world outlook is not based on the swinish and kickbacks that they receive and not on the grants they distribute.

My world outlook is some another. Reports that we have here, passed through the Committee for combating pseudoscience (by the Russian Academy of Sciences). The representatives of the Committee after checking out our reports said that in order to understand this they need for 10-15 years. Add 15 years to 2003 and get the year 2018. When have we passed a "non-returning point"? - This year (2009) practically (according to the American experts). When there does come the period when we start just to combat the consequences of elements and disasters? - It will be 2015 (according to the Belgian specialists' predictions).

Today they are going to experiment with black holes. Don't worry, there won't be any black holes. Because "the worm transitions" are the transitions from some country's budgets to the budgets of others. It is trivial money pumping out.

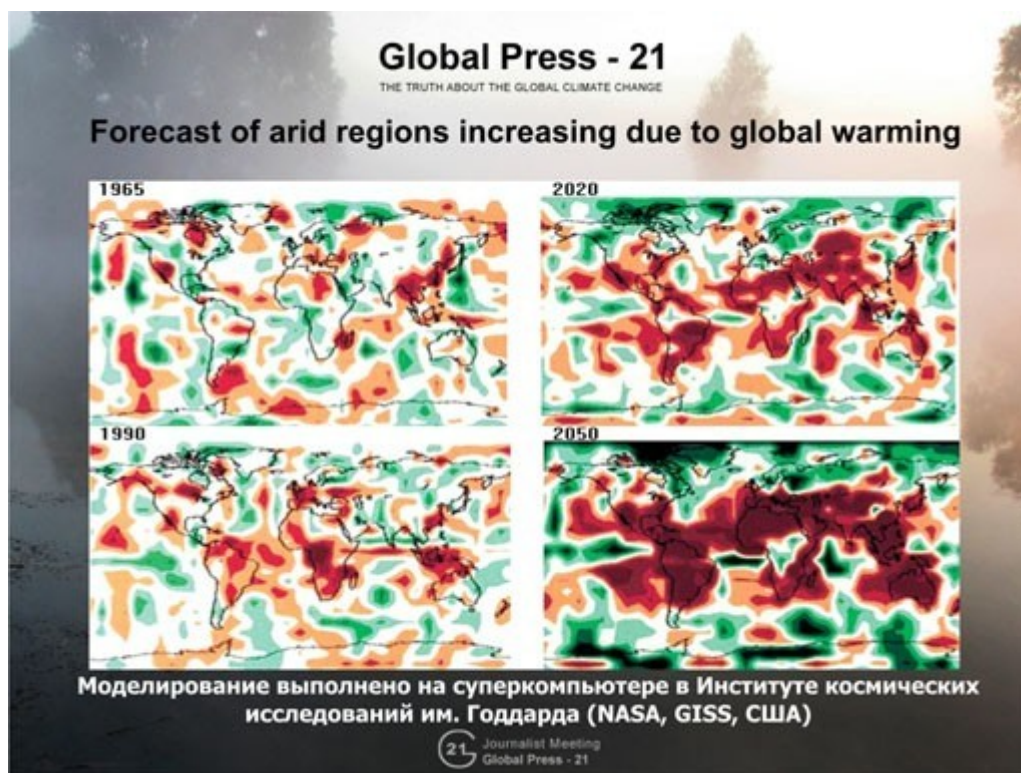

As for our Universe - it has its geometry.

I am convinced that it would be a day when many of you will say: "Well, there is the truth... it is difficult to defend it, but it is and we can live with it". There is an alternative today, which is offered and will defend. Because there is no more time for this mechanism rocking, it has ended the day before yesterday.

Many people say that global climate change does not and will not affect Ukraine. This is not true. Take a look at projections of scientists for the soil temperature changing and find Ukraine there.

And when people say that we will harvest by 2-3 crops, it is not so. With such weather changes this is not realistic. Even if we would have something to eat. But we are happy people since live at the "promised land". And I believe that Ukraine will feed half the world, and we will participate in it. I have been saying it for 8 years.

The size of the laptop is nice, the speed of information trunk is wonderful. But everything comes down to simple – we always need to eat and get energy to be able to live, love, enjoy ... to create, eventually.

There is a small example in order to understand that our Ukrainian science today is practically no different from the foreign. In 2009 (October, 14-16) in Odessa was organized the international forum "Interregional problems of environmental security" on the base of Building Academy. There was an excellent event at which representatives of different countries (Russia, Belarus, Poland, etc.) was invited. Two cofounders of this event were our Building Academy and The Ecological University.

The St. Petersburg University and our Odessa Ecological University turn out the climatologists. So think about it: there hadn't been anyone at registration and even a rector of the University hadn't come to the opening of the Forum. And I sure that a book with many reports will be released soon where they will say that know, understand and see everything. They don't see anything but just are playing with us...

I am a sincere man and used to go difficult ways, so I invite you in Odessa on March, 12<sup>th</sup>, 2010 at the International journalists' conference "Global Press - 21" on "The Truth about Global Climate Change". What do I do it for? I don't need any PR, I'm already known in many countries without any PR efforts. I would like to see our Ukrainian and foreign journalists have received such instruments in their hands so that scientists shouldn't subtilize. For example, they say: "You know, the 18-th factor has changed in such a climate model..." Just like in anecdote about the numbered jokes. And we look at them and think they know and can do everything. Don't subtilize, you should to be easier. Usually all ingenious is simple. I'm convinced that journalists who will be at my Conference (held over 2 days) will have unique opportunity to understand the processes occurring on a planet, to see their depth and simplicity of the solution. I'm lucky, because I had graduated the "Yaroslav Mudriy's Academy", in which Michael Bulgakov studied in due time. Therefore, I understand perfectly what he meant saying "you need to knock on heads".

And here is the last conclusion. All what specialists will tell you about their fighting against climate change is just a struggle for kickbacks and grants. There is an ugly word – "Dough", it is their main motive. And I will send this pig to the Nobel Committee.

Thank them for their prizes and laureates' conclusions that we are the randomness and were appeared as the result of the "Big Bang". Thank them for promoting the theory of CO2 climate change influence.

Today they consider the Earth as a closed system. When we asked them "Why are the polar caps on Mars melting or why is the Sun inactive for longer than usual?", they say the following: "This is just the Sun ..., this is the Mars, and we are on the Earth ...". This is silly, because we must take notice and take account of changes in other systems.

And the causes of the Global climate change are very simple. I won't subtilize, but just will name them.

1. Since 1988, the material Earth's density has gradually decreased.
2. The speed of the Earth's revolution round the Sun has increased.
3. There is an increase in heat capacity of atomic-molecular structures.

And all this is confirmed. Today time runs approximately four times faster. Not on your wristwatches but the time as it is. And many will feel it, especially those who are older. Because everything runs faster. Where does it run faster? - In the Universe. And we (together with our clock) are appearing and living more quickly in it. Until 1988, the same second had its certain duration differed from the present one. All of this is the Time theory.

I promise you, dear colleagues, that'll explain this if not within an hour, within 2 hours. Why was a disaster with Shuttle Colombia? Off-loader held serious verification. Because a heat capacity of atomic-molecular structures has increased and the heating temperature of shell was critical for toured-off plates.

And, for this reason, many man-made problems are possible today. And today, when there were problems in Siberia, it is easier to write all off on those who haven't lived anymore. If to speak about Chernobyl, there are also some reasons I'll tell about at the following conferences.

There is a scientific paradigm, which explains these things without using any calculator, but with an ordinary pencil. It is available and simple. Therefore let's tolerate until March 2010, and you'll see the war (in a good sense of the word) between the mediaeval tenets of modern science and journalists who will decide to support me in this work. Because our lives depend on it.
